PATIENT ANALYSIS AND RESEARCH SYSTEM AND ASSOCIATED METHODS

Abstract of the Disclosure

The patient analysis and research system and
method includes storing a plurality of different
medical guidelines for different health conditions,
and storing historical patient information data for a

5   plurality of patients. Patient information is
collected from users via a global network and
evaluated to generate a patient-specific risk report
based upon at least one of the different medical
guidelines. Also, a physician's patient treatment

10   plan is generated an includes patient-specific
recommendations for reducing risk based upon the
different medical guidelines, while historical
patient information data and patient compliance with
the physician's patient treatment plan is correlated

15   to generate outcome-specific research data.
